

## INSTALLATION NOTES & GUIDELINES FOR MAC OS X: 10.12 Sierra

### BEFORE INSTALLATION

- Disconnect the usb Cressi interface, as well as other similar usb devices & there is no need to disconnect external usb drives or other storage media
- Make sure that you are using the correct installation file according to your needs (MAC OS X: 10.12 Sierra). WARNING: a wrong choice may result in a non functional installation.
- Your system (MAC OS X: 10.12 Sierra) doesn't accept "downloaded from Anywhere" applications, so, you have to go through the following steps.

### INSTALLATION STEPS

- **In the Finder locate the "Install\_CressiPCInterface\_v2\_0\_2.37\_full\_OSX\_10\_12.dmg" file (Don't use Launchpad to do this. Launchpad doesn't allow you to access the shortcut menu).**
- **Control - click the dmg file then choose "open" from the shortcut menu**
- The dmg file contains the installation package: if your settings allow file extensions display, you'll see it as mpkg file, the associated icon resembles a cardboard box.
- Again, **control - click the installation package and choose "open" from the shortcut menu**
- Choose "standard install" when asked for installation type
- You may get a system message referring to "lipo command", and offering the option to install Xcode-related packages - choose not to install them, and disregard the message
- After installation, reboot the system
- The usb interface can be reconnected

### NOTES

- Application and data are kept local to the Home dir of the user who performed the installation
- Old application data (logbook database, settings) that may be present from previous installations, are preserved as much as possible
